

1. Debrief on public presentation of maps November 29
2. Review of second draft of Inventory narrative
3. Discussion of proposed planning recommendations to be included in conclusion of Inventory narrative. These are:
  - develop conservation planning guidelines, based on the findings of this inventory, to be adopted as city policy
  - update and complete street tree inventory
  - develop a comprehensive, city-wide street tree and sidewalk plan, incorporating green infrastructure to address stormwater issues wherever possible
  - confront the expectation of higher tides and inundation in the low-lying parts of the city, by adopting robust design requirements for any new construction or adaptive reuse of existing buildings in the flood plain; and make realistic decisions about how much should be invested there
  - address poor condition and lack of amenities and programming in city parks
